CADD: FM Management Services Ltd.
is a consulting/software development firm that assists organizations in the design, implementation, and maintenance of information systems for managing and operating Facility Assets. Since 1989, CADD: FM has been assisting institutions in applying AutoCAD and database technologies in developing Facility Management Information Systems.

In 1998 CADD:FM developed a Space Inventory product called ISIS™. This was the result of our Clients asking us to provide a desktop alternative to the leading enterprise Space Inventory product. Fortunately MS Access and AutoCAD MAP were at a technical level where this was possible. First we built the Space Inventory system, and then at the request of our Clients, developed a number of *tactical* Facility Management applications which leveraged the Space Inventory data. The latest version of ISIS™ contains eight such *tactical* application modules.

ISIS™ is a strong and capable product and yet resides in the 'desktop environment':
- You do not have to introduce a new product to your organization (you probably already have MS Access and AutoCAD)
- Low learning curve
- Adjusts (you customize) to your existing processes
- Can link to your existing systems
- Inexpensive

Why use ISIS™

As you the Facility Manager juggle projects, routines, and daily demands with limited resources, you need information to be able to *priorize* and *manage*. Without adequate information (data) your decisions can become subject, your efforts inefficient, or both. Traditional methods cannot adequately collect and manipulate the types and quantities of information involved with today's Facilities Management. ISIS can help you have the data you need.

Another Problem?
Another Project?

Will it ever end?
NO

But your time and $$$ will.

Therefore

You need quality information to help you *priorize* and *manage*.

ISIS™
Can help you have the data you need.

Saskatchewan's premier Facility Management Information Systems business solutions provider.

ISIS™ is a database which combines multiple Facility Management functions in one integrated system (AutoCAD interface included optional to use).

Typical Process:

- Review the existing situation – data, systems, people, process, needs, etc.
- Create a strategy for implementing *your* Facilities Management Information System
- Work together to collect your initial data resources (cadd drawings, specs, etc)
- Provide **ISIS™** as a means of storing and retrieving the data
- As required – train/support; collect/create new data (surveys)

ISIS is currently being used to manage over 20 million sq. ft. of space

· Optional - **AutoCAD MAP** linkage supports bi-directional exchange of data:

· Export the AREA (sq. ft or sq.m.) from CADD to Space Inventory database or auto generate Tags on the drawings

· Represent your textual data *Graphically* on CADD floor plan, ex. color code by Department, etc….

AutoCAD drawings Optional

AutoCAD Interface

The ISIS Package:

Corporate Intranet

Electronic Photos

Condition/Adequacy

Building Assessment

Space Inventory

Computerized Maintenance Management Systems

Corporate Databases

Project Tracking

Building Specs

.

#1 Feature/Benefit
Great reporting so you have the information you need to do your job

Tactical Applications: Leasing Furniture Inventory Keys Management

Associated Files

Built with Microsoft Access (or SQL Server)

· You or your I.T. people can support and customize to suit (source code provided)

· No need to introduce a non corporate standard software into your organization

· Industry standard which is capable of sharing data with your other systems

Your custom applications:
Artwork
Ergonomics
Housekeeping
Roof Insp.
Telephone Services Management
University Entitlement Funding
etc

· Easy to live with

· *Better than products many times more expensive*

- Support data included (ex. Uniformat Divisions)

- Easy to learn – YOUR DO NOT NEED FORMAL TRAINING – the ISIS User Manual will walk you thru the steps

- Built in security allows you to set each Users permissions *by module*
